Education

International Institute of Information Technology Bangalore — Bangalore, India
iMTech in ECE with specialization in Computer Science and AI/ML (GPA:3.49/4.00) — *Nov 2021 – July 2026*

Experience

Software Development Engineer Intern — July 2025 – Dec 2025
Amazon India — *Bangalore, India*

- Built an Agentic Ticket Resolution Tool and custom MCP tools to retrieve code, logs, metrics, and alarms from AWS CloudWatch and internal Amazon codebases, accelerating on-call issue resolution.
- Deployed the system on AWS Lambda with SNS-triggered automation for Root Cause Analysis (RCA), reducing manual intervention and mean time to resolution (MTTR) with accuracy of 87% for alarm-based tickets and ∼5 mins for output generation.

Software Developer Intern — May 2025 – July 2025
Oracle India Development Center — *Bangalore, India*

- Developed a scalable Agentic RAG pipeline for UI component documentation, Figma designs and code usage examples of Oracle Redwood Platform. Reducing average developer query resolution time by 80%.
- End-to-end response latency measured at 9 seconds (Chrome DevTools) with 72% reduction in ticket generation, which was handled manually.

Projects

Talent Bridge | *Docker, Kubernetes, Jenkins, Ansible* — Sep 2024 – Nov 2024

- Developed a scalable job portal web application using distributed systems architecture, with automated CI/CD pipelines via Jenkins and Ansible, reducing deployment time. Orchestrated containerized microservices with Docker and Kubernetes, leveraging the Horizontal Pod Autoscaler for load balancing and high availability.
- Enhanced security and compliance by integrating Trivy for vulnerability scanning and implemented real-time monitoring and logging.

JurisMind | *Python, PyTorch, PyMilvus* — June 2024 – Aug 2024

- Built a RAG-based information retrieval pipeline tailored for the Intellectual Property legal domain using PyMilvus vector database for data storage and tokenizers for vector conversion; used Gemini 1.5 Flash for generating final responses.
- Applied Natural Language Processing techniques for legal document understanding and achieved ROUGE-1 score of 0.537 and BERTScore of 0.9100 demonstrating strong semantic alignment with ground truth answers.

CraftCart | *Java, C++* — Aug 2023 – Sep 2023

- Designed a scalable object-oriented design (OOP) software retail product with advanced functionalities, such as multi-customer synchronization, product browsing, cart management, streamlined checkout, and order placement
- For enhancing Customer experience, client application was implemented in C++, while the backend, supported by Java, maintained seamless concurrency through effective file-handling mechanisms.

Technical Skills

Languages: Python, C/C++, Java, SQL
Frameworks Tools: Jupyter, GNU Octave, Arduino, NI Multisim, Figma, VS Code
Libraries: PyTorch, TensorFlow, Pandas, NumPy, Matplotlib, Sklearn, Seaborn, OpenCV, OpenPose, Librosa
Platforms Others: Git, GitHub, Linux
Relevant Coursework: Machine Learning, Maths for Machine Learning, Visual Recognition, Data Structures, Algorithms,Software Production Engineering, Communication Networks

AWARDS

- **Flipkart GRiD 6.0** : Finalist at Flipkart GRiD 6.0 **2025**
- **Toshiba Smart City Hackathon'23** : Secured 3rd position in Toshiba Smart City Hackathon **2023**
- **JEE ADVANCED 2021** : Secured 8236 rank among 0.25M shortlisted candidates **2021**
